

## Conteneur à usage de laboratoire mobile

Le laboratoire mobile est une installation scientifique transportable, généralement aménagée dans un conteneur, conçue pour être déployée sur différents sites. Il permet de réaliser des analyses et des expérimentations directement sur le terrain.

### Mobile Laboratory Container

The mobile laboratory is a modular, transportable scientific unit, typically housed within a standardized container, engineered for rapid deployment across multiple sites. It enables in-situ analytical testing and experimental procedures under field conditions.

| Specifications       |                    |
|----------------------|--------------------|
| Dimensions in meters | 6.15 * 2.44 * 2.59 |
| Weight – Empty       | 4,275kg            |

### Applications

1. Modular, transportable scientific unit housed in ISO-standard containers.
2. Rapid deployment across multiple sites for field operations.
3. In-situ analytical testing and experimental procedures under real conditions.
4. Applications: water quality monitoring, air quality assessment, mineral quality control.
5. Ensures operational flexibility and compliance in diverse industrial and environmental contexts.
