

Panier de transport

Un panier de transport industriel sert principalement à faciliter la manutention, le stockage et le déplacement sécurisé de pièces, composants ou produits finis dans les environnements industriels et logistiques. Il optimise les flux de travail en réduisant les erreurs, les pertes et l'espace occupé.

Transportation basket

The industrial transport basket is a dedicated handling device designed to facilitate the safe movement, storage, and transfer of components, parts, or finished products within industrial and logistics environments.

It ensures secure transport between workstations, assembly lines, and storage areas, while optimizing space utilization and protecting goods against shocks, corrosion, or contamination. Widely used across sectors such as food processing and chemical, these baskets are engineered with durable materials and standardized dimensions to improve efficiency, traceability, and operational reliability.

Specifications	
Container dimensions in meters	6.0 * 2.45 * 1.6
Weight – Empty	3.375 kg
Safe working load	15,200 kg

Applications

1. Safe handling device for components, parts and products
2. Facilitates movement and storage across workstations, assembly lines and warehouses
3. Durable construction in steel or high-density polymers, resistant to corrosion and chemicals
4. Optimize space with stackable or nestable designs
5. Protects goods against shocks, contamination and environmental exposure
6. Applicable sectors automotive, food processing, chemical, pharmaceutical and logistics
